

## **Premier Group Case Study**

### ***Background***

Premier Group is a modern technical recruitment company which employs around 30 consultants working in the highly competitive recruitment industry. They specialise in Sales, IT and Engineering recruitment and have been in business since 2000.

### ***The problem***

Premier Group had an old software system, which badly needed updating to match the new business needs. It had to be reliable, easy to use and allow their staff to maximise efficiencies, without disturbing current business.

### ***How we solved it***

Kaizen Systems engaged all the staff in a consultative process so the current and new needs of the business were understood. We then designed a system that would allow the Premier Group staff to work in ways familiar to them but with built in efficiencies. This allowed us to migrate all the required data in recognisable formats, into the new system for them.

### ***The outcome***

Premier Group were delighted with the first version of their new system, allowing them to continue their work seamlessly but more efficiently. This provided Premier Group with exactly what they had asked for and needed to remain at the top of the very competitive market they are in.

### ***The future***

Work didn't stop with the initial version and development has already commenced on the second version of the software which will include lots of new (asked for) functionality to further improve the efficiency and effectiveness for each of the individual employees.
